

COMMANDS

- **git branch**
 - Lists all existing branches in your current working directory
- **git branch [name]**
 - Creates a new branch (pointer to your series of commits)
- **git checkout [name]**
 - Enables us to switch between branches
- **git checkout [hash]**
 - Shows state of the working directory in the past
- **git push --set - upstream origin <branch_name>**
 - Pushes a branch (other than main/master) to your Github repository
- **git merge [name]**
 - Merges/combines the changes in your branch into the main branch
- **git branch -d [name]**
 - Deletes branches after you have merged with the master branch
